RELIABILITY ENGINEERING FOR N8N AGENCIES

Your workflow shipped. Then it broke quietly.

Afterlaunch finds and fixes the failures that happen after delivery: duplicate webhooks, expired tokens, workflows that stop running, and runs that succeed while doing nothing. Fixed before your client notices, delivered under your brand.

Stripe → HubSpot sync · executions

09:00:02	Webhook · invoice.paid		Success · 1 item
09:14:37	Webhook · invoice.paid		Success · 1 item
09:14:41	Webhook · invoice.paid	RESENT	Success · duplicate
09:31:10	Webhook · invoice.paid		Success · 2 items
10:02:55	Webhook · invoice.paid	TOKEN EXPIRED	Success · 0 items

⚠ **Every row says Success.** Two of them cost your client money: a duplicate invoice, and a sync that silently did nothing. (Illustration.)

✓ White-label for agencies ✓ No fix, no fee ✓ NDA on request

Fixed · Failure-tested · Handed back under your brand

01 · WHAT BREAKS AFTER LAUNCH

Six failures your client finds before you do.

None of these show up in testing. All of them show up in production, usually on a Monday.

duplicate event

Webhooks fire twice

Stripe and Shopify resend events by design. Without a dedupe step, your client gets duplicate orders, invoices and CRM contacts.

401 unauthorized

Tokens expire

An OAuth token lapses or a key is regenerated. Every run fails from that moment, and nobody is alerted.

0 executions

Workflows stop running

A trigger gets deactivated or the instance restarts. No runs means no errors, so the silence looks like success.

success · 0 items

Green runs that did nothing

A filter drops every item or an API returns an empty page. The execution is green and the business result is empty.

429 too many requests

Rate limits & retry loops

Busy days trigger 429s. No backoff means dropped data; unlimited retries mean a blocked account.

invalid JSON

AI output breaks the chain

The model returns text where JSON was expected, or invents a field. Every step after it fails or writes garbage.

Why testing doesn't catch them: the failures arrive after handoff

Build
Workflow built to spec

Test
Happy path passes ✓

Handoff
Client goes live, team moves on

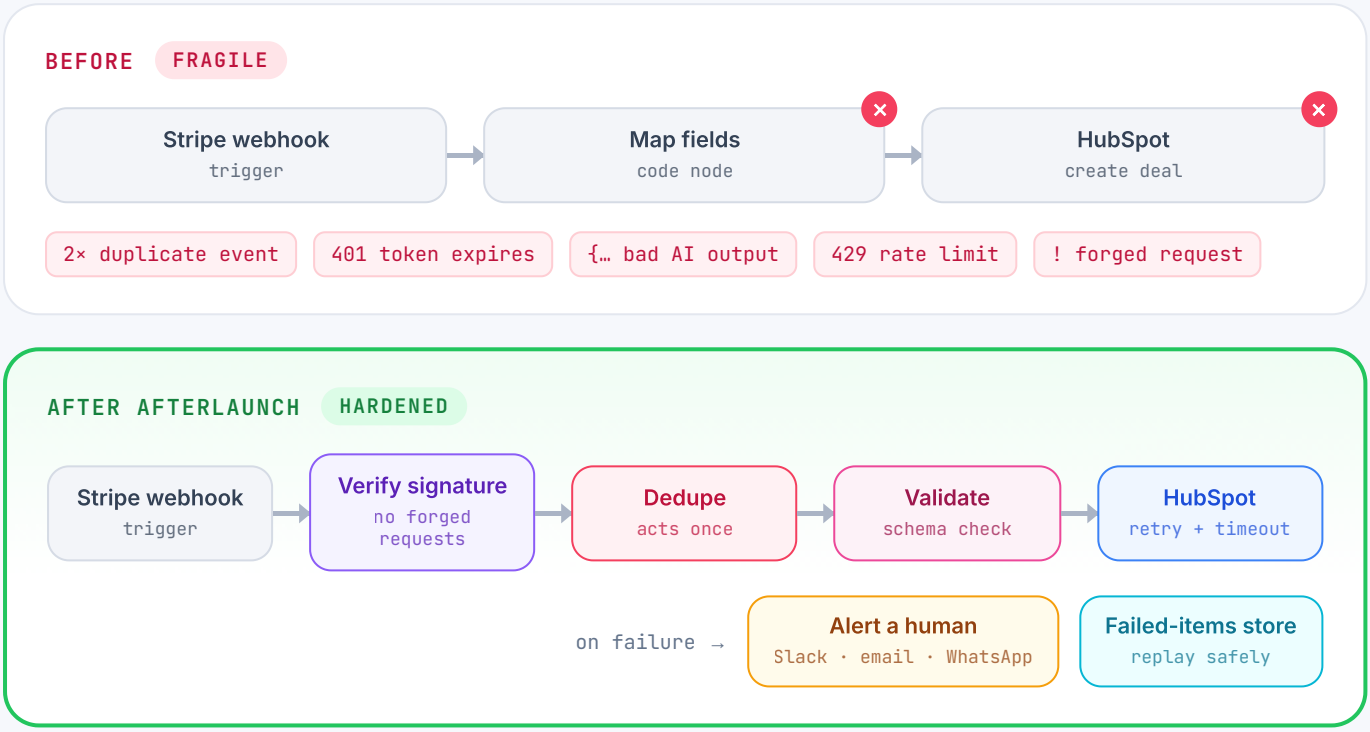

Weeks later
Token expires, event resent, API changes

Client notices
Before you do, and trust drops

02 · HOW WE FIX

Five steps added. Five failures caught.

Most broken workflows are missing the same few safeguards. Here's a typical Stripe → HubSpot sync, before and after.

THE AFTERLAUNCH STANDARD

Every workflow we touch leaves with these eight.

01

Duplicate-proof

The same event can arrive twice and only act once.

02

Retries with limits

Backoff with jitter and a maximum. Never an endless loop.

03

Timeouts everywhere

Every external call has a limit, so nothing hangs for hours.

04

A human gets alerted

Plain-language alerts saying what broke and what it affected.

05

AI output validated

Model responses are checked against a schema before use.

06

Credential expiry handled

Auth failures are caught and flagged with a reconnect guide.

07

Failed items kept

Failures are stored to replay safely, not re-typed by hand.

08

Signed requests only

Webhooks verify the sender, so no fake records get in.

03 · HOW IT WORKS

From “it broke” to fixed and tested.

No call needed to start, no hourly billing. You know the price before any work begins.

1 **Send one workflow**
Export the n8n JSON or describe what stopped happening. Or run it through the free scanner first.
TODAY

2 **Get a video review + fixed quote**
A short video showing the root cause and the risks, with a fixed price to fix it.
WITHIN 24 HOURS

3 **Fix & harden**
The root cause is fixed and the Afterlaunch safeguards are added where they're needed.
2–5 DAYS

4 **Failure-test it**
Every fix is tested against the failure that caused it, before it's handed back.
BEFORE HANDOFF

5 **Handed back under your brand**
No Afterlaunch branding anywhere. Forward it to your client and set your own price.
DONE

WHAT YOU GET BACK

Four files, ready to forward.

`workflow.json`
The fixed workflow
Import it straight into n8n. Credentials stay yours.

`report.pdf`
One-page report
What broke, why, what changed and what was tested.

`runbook.md`
Run book
What each new alert means and exactly what to do.

`walkthrough.mp4`
Video walkthrough
The failure, the fix, and the test passing.

- No fix, no fee
- White-label, unbranded
- Resell at your price
- NDA on request

04 · PRICING

Fixed prices. Known before work starts.

Every job starts with a free review and a fixed quote. Prices in USD.
